FASB Issues Final Standard on Improvements to Reportable Segment Disclosures

This Heads Up has been updated to reflect discussion from the 2023 AICPA & CIMA Conference on Current SEC and PCAOB Developments (the “AICPA Conference”). Specifically, the SEC indicated that when a single reportable segment entity is managed on a consolidated basis, the entity would be expected to conclude that consolidated net income is the measure of segment profit or loss that is most consistent with U.S. GAAP. Further, the SEC encouraged registrants that choose to early adopt ASU 2023-07, and that include an additional measure or measures of segment profit or loss that are not determined in accordance with GAAP, to reach out to the SEC to discuss their plans.

Overview

The FASB issued ASU 2023-07 on November 27, 2023. The amendments “improve reportable segment disclosure requirements, primarily through enhanced disclosures about significant segment expenses.” In addition, the amendments enhance interim disclosure requirements, clarify circumstances in which an entity can disclose multiple segment measures of profit or loss, provide new segment disclosure requirements for entities with a single reportable segment, and contain other disclosure requirements. The purpose of the amendments is to enable “investors to better understand an entity’s overall performance” and assess “potential future cash flows.”

The ASU applies to all public entities that are required to report segment information in accordance with ASC 280.

1 For more information about the AICPA Conference, see Deloitte’s December 10, 2023, Heads Up.
2 FASB Accounting Standards Update (ASU) No. 2023-07, Improvements to Reportable Segment Disclosures.
3 The ASC master glossary defines the term “public entity,” which includes broker-dealers and entities that only have debt securities trading in a public market.
4 For titles of FASB Accounting Standards Codification (ASC) references, see Deloitte’s “Titles of Topics and Subtopics in the FASB Accounting Standards Codification.”
Background

Under ASC 280, a public entity must report, for each reportable segment, a measure of the segment’s profit or loss that its chief operating decision maker (CODM) uses to assess segment performance and make decisions about resource allocation. However, ASU 2023-07 notes that “although information about a segment’s revenue and measure of profit or loss is disclosed in an entity’s financial statements” under the current requirements, “there generally is limited information disclosed about a segment’s expenses and, therefore, investors supported enhanced expense disclosures.” Accordingly, the ASU requires public entities to provide investors with “additional, more detailed information about a reportable segment’s expenses” and is intended “to improve the disclosures about a public entity’s reportable segments.”

The final ASU is generally consistent with the proposed ASU issued on October 6, 2022, apart from the qualitative transition disclosure requirement. On the basis of feedback received during the comment period, the Board removed the requirement for public entities to describe changes in segment expense categories between the period of adoption and the most recent comparative period.

The Board decided to retain all existing segment disclosure requirements in both ASC 280 and other Codification topics. The ASU’s amendments are incremental to those requirements and “do not change how a public entity identifies its operating segments, aggregates those operating segments, or applies the quantitative thresholds to determine its reportable segments.”

Main Provisions

Summary of Main Provisions

<table>
<thead>
<tr>
<th>Change</th>
<th>Overview and When Disclosure Is Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>Significant segment expenses</td>
<td>Public entities are required to disclose significant segment expenses by reportable segment if they are regularly provided to the CODM and included in each reported measure of segment profit or loss. Disclosures are required on both an annual and an interim basis.</td>
</tr>
<tr>
<td>Other segment items</td>
<td>Public entities are required to disclose other segment items by reportable segment. Such a disclosure would constitute the difference between reported segment revenues less the significant segment expenses (disclosed) less reported segment profit or loss. Disclosures are required on both an annual and an interim basis.</td>
</tr>
<tr>
<td>Interim disclosures</td>
<td>All existing annual disclosures about segment profit or loss must be provided on an interim basis in addition to disclosure of significant segment expenses and other segment items as noted above.</td>
</tr>
<tr>
<td>Multiple measures of a segment’s profit or loss</td>
<td>Public entities may disclose more than one measure of segment profit or loss used by the CODM, provided that at least one of the reported measures includes the segment profit or loss measure that is most consistent with GAAP measurement principles. Disclosures are required on both an annual and an interim basis.</td>
</tr>
<tr>
<td>CODM-related disclosures</td>
<td>Disclosure of the CODM’s title and position is required on an annual basis, as well as an explanation of how the CODM uses the reported measure(s) and other disclosures.</td>
</tr>
<tr>
<td>Entities with a single reportable segment</td>
<td>Public entities must apply all of the ASU’s disclosure requirements, as well as all existing segment disclosure and reconciliation requirements in ASC 280, on an annual and interim basis.</td>
</tr>
<tr>
<td>Recasting of prior-period segment information to conform to current-period segment information</td>
<td>Recasting is required if segment information regularly provided to the CODM is changed in a manner that causes the identification of significant segment expenses to change.</td>
</tr>
</tbody>
</table>
Significant Segment Expenses

Significant segment expenses are defined in the ASU as “expenses that are regularly provided to the [CODM] and included within each reported measure of segment profit or loss (collectively referred to as the ‘significant expense principle’).” ASU 2023-07 requires public entities to “disclose for each reportable segment the significant expense categories and amounts” for such expenses. If a public entity does not separately disclose expenses under the significant expense principle, it is then required to disclose the nature of the expense information used by the CODM to manage the segment’s operations. The ASU focuses on information that is regularly provided to the CODM even if it is not regularly reviewed by the CODM.

Connecting the Dots

Under the current guidance in ASC 280-10-50-22, public entities are only required to disclose certain expenses (e.g., interest expense and depreciation) if they are “included in the measure of segment profit or loss [or] otherwise regularly provided” to the CODM. For example, even though selling expenses may have been included in an entity’s measure of segment profit or loss, the previous guidance did not require public entities to disclose selling expenses. Under the final ASU, if selling expenses are determined to be a significant segment expense that is regularly provided to the CODM, public entities must disclose selling expenses. Reportable segments may have different categories of significant segment expenses as a result of the nature of their operations and what is regularly provided to the CODM.

Significance Threshold and Regularly Provided Information

The ASU states that an entity should “consider relevant qualitative and quantitative factors when determining whether segment expense categories and amounts are significant” and should identify segment expenses on the basis of “amounts that are regularly provided to the [CODM] and included in reported segment profit or loss.”

Connecting the Dots

The ASU does not define the term “significant” or “regularly provided” or specify how public entities may interpret its meaning. The Board expects that, “when determining whether certain segment items and amounts provided to the CODM must be disclosed,” public entities will be able to use judgment similarly to how they use it under the existing disclosure requirements in ASC 280. In general, we believe that “regularly provided” would mean at least quarterly. However, during the AICPA Conference, the SEC noted that a frequency of less than quarterly could also be considered “regularly provided.”

Public entities should review, both upon transition and for each reporting period, financial information (e.g., CODM packages, or segment information regularly provided to the CODM through different means such as electronically, in dashboards, or in paper format) and evaluate such information for significant expenses and for what would be considered “easily computable.” In addition, public entities should monitor for changes that occur between periods and consider the recasting requirements.

Easily Computable Segment Expenses

The ASU requires public entities to disclose segment expenses that are “regularly provided” to the CODM or “easily computable from information that is regularly provided.” In addition to easily computable information that is regularly provided to the CODM, required disclosures include information about significant expenses that is “expressed in a form other than actual...
amounts, for example, as a ratio or an expense as a percentage of revenue.” Examples of such disclosures would include:

- If the CODM is regularly provided “a segment revenue amount and a segment gross margin amount, segment cost of sales can be easily computed from this information.” Accordingly, “if cost of sales is significant,” it would need to be disclosed as a significant segment expense.
- If the CODM is regularly provided “a segment revenue amount and segment warranty expense expressed as a percentage of segment revenue . . . segment warranty expense can be easily computed from this information.” Accordingly, “if warranty expense is significant,” it would need to be disclosed as a significant segment expense.
- Similarly, if bad-debt expense or marketing expense as a percentage of revenue is part of the measure of segment profit or loss and is considered significant, these expenditures would need to be disclosed as significant segment expenses.

**Example 1**

**Easily Computable Segment Expenses**

- Company A has identified the following reportable segments: United States and Europe.
- The CODM uses segment gross profit to assess segment performance and allocate resources.
- U.S. and European gross margin percentages are regularly provided to the CODM.
- Cost of sales is considered both easily computable and significant.

Because cost of sales is determined to be an easily computable significant segment expense regularly provided to the CODM and is included in the segment measure of profit or loss (segment gross profit), disclosure is required.

The table below shows amounts related to the disclosure illustrated in this example.

<table>
<thead>
<tr>
<th>Segment</th>
<th>Segment Revenue</th>
<th>Cost of Sales</th>
<th>Segment Gross Profit</th>
</tr>
</thead>
<tbody>
<tr>
<td>United States</td>
<td>$823,000</td>
<td>$551,000</td>
<td>$272,000</td>
</tr>
<tr>
<td>Europe</td>
<td>$467,000</td>
<td>312,000</td>
<td>$155,000</td>
</tr>
<tr>
<td></td>
<td>$1,290,000</td>
<td>$863,000</td>
<td>$427,000</td>
</tr>
</tbody>
</table>

For another example illustrating the ASU’s disclosure requirements related to significant segment expenses, see Example 1 in the appendix of this Heads Up.

**Other Segment Items**

For each reportable segment, the ASU requires public entities to disclose an amount for other segment items that represents “the difference between reported segment revenues less the [significant] segment expenses disclosed . . . and reported segment profit or loss.” A public entity would also need to provide a qualitative disclosure describing the composition of the other segment items, including the nature and type of the other segment items; however, a quantification for each item identified is not required. This disclosure would be required even when a public entity does not separately report any significant segment expenses.

The following are some examples of other segment items:

- The total amount of “a reportable segment’s expenses that are included in the reported measure(s) of a segment’s profit or loss but are not regularly provided to the [CODM].”
- The total amount of a segment’s expenses that are not significant.
• The total amount of “a reportable segment’s gains, losses, or other amounts that also are included in each reported measure of a segment’s profit or loss.”

• Segment expense amounts required under ASC 280-10-50-22 (e.g., interest expense, depreciation, and amortization expense), when those specified amounts are included in the reported measure of segment profit or loss but are not considered significant segment expenses.

**Example 2**

**Significant Segment Expenses and Other Segment Items**

• Company B has identified the following reportable segments: computer hardware and computer software.

• The CODM uses segment earnings before interest, taxes, depreciation, and amortization (segment EBITDA) to assess segment performance and allocate resources.

• Cost of sales and warranty expenses for computer hardware and hosting fees for computer software are regularly provided to the CODM.

• Bad-debt expenses and marketing expenses expressed as a percentage of revenue are regularly provided to the CODM for both the computer hardware and software segments.

• Bad-debt expenses and marketing expenses are both considered easily computable; however, only marketing expenses are considered significant.

Because marketing expense is determined to be an easily computable significant segment expense regularly provided to the CODM and is included in the segment measure of profit or loss (segment EBITDA), disclosure is required.

Company B has also disclosed a qualitative description for other segment items, which represent “the difference between reported segment revenues less the [significant] segment expenses disclosed . . . and reported segment profit or loss.” The table below shows amounts related to the disclosure illustrated in this example.

<table>
<thead>
<tr>
<th>Segment</th>
<th>Segment Revenue</th>

* Includes legal and professional costs, bad debt, and goodwill impairment expense.

** Includes selling expenses and bad-debt expenses.

For another example illustrating the ASU’s disclosure requirements related to significant segment expenses and other segment items, see **Example 1** in the appendix of this **Heads Up**.

**Interim Disclosures**

Under the ASU, public entities must disclose significant segment expenses and other segment items, as well as all existing segment information about profit or loss, on an annual and interim basis. Such disclosures include information that must be disclosed annually in accordance with ASC 280-10-50-22 through 50-26C (e.g., a measure of a segment’s profit or loss and total assets, interest revenue and expense, depreciation and amortization expense). In the ASU’s Basis for Conclusions, the Board indicates that it expects this new interim disclosure requirement to “result in more timely decision-useful information for users without placing significant additional burden on preparers because the interim segment information is generally expected to be available from an entity’s existing financial systems and records.”
Disclosures Required on an Interim Basis

<table>
<thead>

</tbody>
</table>

* Segment asset disclosure is only required if such information is provided to the CODM.

\(^{**}\) To the extent that such information would be required for the company on an annual basis.

**Multiple Measures of a Segment’s Profit or Loss**

The ASU permits public entities to disclose more than one measure of segment profit or loss, provided that at least one of the reported measures includes the segment profit or loss measure that is most consistent with GAAP measurement principles (the “required measure”). Specifically, ASC 280-10-50-28A (added by the ASU) states that “[i]f the [CODM] uses more than one measure of a segment’s profit or loss in assessing segment performance and deciding how to allocate resources, a public entity may report one or more of those additional measures of segment profit [or loss]. However, at least one of the reported segment profit or loss measures . . . shall be that which management believes is determined in accordance with the measurement principles most consistent with those used in measuring the corresponding amounts in a public entity’s consolidated financial statements.” (See the SEC Reporting Considerations section below for clarifications the SEC staff made at the AICPA Conference.)

In addition to reconciling each reported measure to the consolidated financial statements, a public entity that discloses multiple measures of a segment’s profit or loss should provide all existing disclosures about the segment’s profit or loss as well as about segment assets if such information is provided to the CODM. The new requirement to provide significant segment expenses and other segment items would also apply to each of these additional reported measures. A public entity that reports an additional measure for a reportable segment in the current period should disclose this additional measure in the prior comparative periods if it was provided to the CODM in those prior periods. Further, “a public entity is not precluded from reporting the additional measure or measures for the prior periods in which the measure or measures were not provided to the [CODM].”

The graphic below illustrates the ASU’s requirements when a public entity discloses multiple measures of a segment’s profit or loss.

---

\(^{5}\) Reproduced from the FASB and IASB Staff Paper, Agenda Reference AP34, “Segment Reporting: Improvements to Reportable Segment Disclosures.”
CODM-Related Disclosures

Other notable disclosures that the ASU requires public entities to provide include:

- “The title and position of the individual or the name of the group or committee identified as the [CODM].”
- “How the [CODM] uses the reported measure(s) of segment profit or loss in assessing segment performance and deciding how to allocate resources.”
- The method applied to allocated overhead expenses disclosed as a significant segment expense, regularly provided to the CODM, and included within the measure of segment profit or loss.
- Separate disclosure of interest expense that is a significant segment expense, even if a public entity discloses interest expense as part of net interest income. This requirement will mostly affect highly leveraged public entities and financial services entities.

For an example illustrating the first two disclosure provisions above, see Example 2 in the appendix of this Heads Up.

Entities With a Single Reportable Segment

A public entity that has a single reportable segment should provide all disclosures required by the ASU (e.g., significant segment expenses and other segment items) as well as those required by the existing segment guidance in ASC 280. In other words, if the measure of a segment's profit or loss that the CODM uses to allocate resources and assess segment performance is not a consolidated GAAP measure and is not clearly evident from the disclosures provided, it would need to be reported and reconciled to consolidated income before income taxes. Provided that these requirements are met, an entity with a single reportable segment also may report additional performance measures that the CODM uses to assess segment performance and determine resource allocation, provided that at least one of the reported measures includes the segment profit or loss measure that is most consistent with GAAP measurement principles. (See the SEC Reporting Considerations section below for clarifications the SEC staff made at the AICPA Conference.)

A public entity with a single operating segment should identify the measure or measures of the segment's profit or loss that the CODM uses in assessing segment performance and deciding how to allocate resources. The Board expects that those measures generally will be apparent from the internal management reports that are regularly provided to the CODM.

When a consolidated GAAP measure is used, a public entity would have to disclose the measure of profit or loss used, information about all significant expenses that are regularly provided to the CODM and included within that measure, and any other segment items whose line items could differ from those that are currently presented on the face of the income statement. Further, information about a single reportable entity, if regularly provided to the CODM and included in the measure of profit or loss, might need to take into account a category and amount for allocated corporate overhead expenses as a significant segment expense.

For an example illustrating the ASU’s disclosure requirements for an entity with a single reportable segment, see Example 3 in the appendix of this Heads Up.

Connecting the Dots

Before adopting this ASU, entities with a single reportable segment were not explicitly required to provide segment disclosures beyond those provided on an entity-wide basis. Such entities will now be required to expand their segment footnote disclosures by providing all the disclosures currently required for multiple-segment entities as
well as those required by the ASU. As part of this requirement, the entity’s segment revenue and profit or loss measure should be clearly disclosed and the entity must review information regularly provided to the CODM for significant segment expenses and other segment items.

Recasting of Prior-Period Segment Information to Conform to Current-Period Segment Information

The ASU amends ASC 280 to replace the word “restate” with “recast.” The ASU’s changes related to the recasting of prior-period segment expense information can be summarized as follows:

• An entity that “changes the segment information that is regularly provided to the [CODM] in a manner that causes the identification of significant segment expenses to change,” or that “changes its internal reports and the segment expense information that is regularly provided to the CODM changes in the current period,” is required to recast all periods, including interim periods, unless it is impracticable to do so in a manner consistent with the existing recasting requirements related to a change in composition of the entity’s reportable segments.

• Recasting is not required for an entity that has “significant changes from prior periods to the measurement methods of expenses, the method for allocating expenses to a segment, or changes in the method for allocating centrally incurred expenses.” However, “it is preferable to show all segment information on a comparable basis to the extent it is practicable to do so” in a manner consistent with the existing recasting requirements for reflecting a change in measurement of a segment’s profit or loss.

SEC Reporting Considerations

Segment Disclosure in MD&A

An SEC registrant’s determination of reportable segments provides the basis for its required disclosures in the business and MD&A sections of its filing. For example, SEC Regulation S-K, Item 101(c), states that a registrant should provide a narrative description of the business, “focusing upon the registrant’s dominant segment or each reportable segment about which financial information is presented in the financial statements.” In addition, SEC Regulation S-K, Item 303(b), provides guidance on MD&A of financial condition and results of operations. It states, in part:

Where in the registrant’s judgment a discussion of segment information and/or of other subdivisions (e.g., geographic areas, product lines) of the registrant’s business would be necessary to an understanding of such business, the discussion must focus on each relevant reportable segment and/or other subdivision of the business and on the registrant as a whole.

To comply with this guidance, a registrant should provide disclosures that are consistent with those of its reportable segments.

Historically, ASC 280 precluded a registrant from disclosing more than one measure of segment profit or loss in the notes to the financial statements. Therefore, any additional measures of profit or loss that were used by the CODM could only be presented as non-GAAP measures outside the financial statements (e.g., within MD&A), provided that they comply with the SEC’s non-GAAP rules and regulations. Because the ASU now permits public entities to disclose multiple measures of profit or loss that are used by the CODM, it is unclear whether a registrant will be permitted or otherwise required to discuss more than one segment measure of profit or loss within MD&A.

Further, the SEC’s rules and regulations⁶ allow a segment measure to be discussed on a segment-by-segment basis outside the financial statements in MD&A without being

⁶ See Question 104.01 of the SEC’s Compliance and Disclosure Interpretations (C&DIs) on non-GAAP financial measures.
considered a non-GAAP measure (e.g., segment EBITDA). However, if this same segment performance measure is discussed on an aggregated segment basis, it is considered a non-GAAP measure and the registrant would be required to comply with the SEC’s non-GAAP rules and regulations. The ASU does not change this. However, under the ASU, a registrant with a single reportable segment may now report a segment performance measure that was not prepared by using measurement principles consistent with GAAP (e.g., consolidated segment EBIDTA). We believe that such a measure would not be considered a non-GAAP measure for the purpose of discussing the registrant’s performance outside the financial statements, and the registrant would not be required to comply with the SEC’s non-GAAP rules and regulations in such circumstances.

In the absence of further interpretive guidance from the SEC, registrants should consider consulting with their auditors and legal counsel before adopting the ASU to determine the impact it will have on the discussion of results of operations in MD&A.

**Connecting the Dots**

**Entities With a Single Reportable Segment**

During the AICPA Conference, the SEC indicated that when a single reportable segment entity is managed on a consolidated basis, the SEC would expect the entity to conclude under the new guidance in ASC 280-10-55-15D that the measure of segment profit or loss that is most consistent with U.S. GAAP is consolidated net income.

We encourage entities to consider discussing, with auditors, advisers, or the SEC staff, how the staff’s view should be applied if the entity is a single reportable segment entity and management concludes that it does not manage the entity on a consolidated basis and may therefore use a measure of segment profit or loss that is not consistent with U.S. GAAP.

**Multiple Measures of a Segment’s Profit or Loss**

During the AICPA Conference, the SEC stated that the SEC staff does not believe that such additional measures are required or expressly permitted by GAAP (since the ASU does not identify specific measures that may be disclosed, such as EBITDA). The SEC indicated that such measures therefore would be considered non-GAAP measures.

Further, the SEC encouraged registrants that choose to early adopt ASU 2023-07, and that include additional measures that are not determined in accordance with GAAP, to reach out to the SEC to discuss their plans.

Evaluating whether a non-GAAP measure is misleading in the context of Regulation G may be complex. Additional measures included in the financial statement footnotes would be subject to management’s assessment of internal control over financial reporting and external audit procedures. Registrants are encouraged to consult with their advisers if they intend to early adopt ASU 2023-07 and disclose additional measures that are not consistent with GAAP.

The examples below illustrate these concepts for a registrant with more than one reportable segment. Note, however, that this area is subject to change and registrants should continue to watch for announcements or further guidance from the SEC staff.
### Example 3

**One Measure of Segment Profit and Loss**

Assume that a registrant’s CODM regularly reviews segment EBITDA to assess segment performance and allocate resources and does not use other measures of segment profit or loss. The registrant would identify segment EBITDA as the required measure of segment profit and loss. Segment EBITDA for each segment would not be considered a non-GAAP measure because it must be disclosed in accordance with ASC 280. However, in a manner consistent with the interpretation in **C&DI Question 104.04**, presentation of total segment EBITDA or consolidated EBITDA “in any context other than the . . . required [segment footnote] reconciliation . . . would be the presentation of a non-GAAP financial measure.”

### Example 4

**Multiple Measures of Segment Profit and Loss That Are Consistent With GAAP**

Assume that a registrant’s CODM regularly reviews GAAP gross profit and GAAP operating profit to assess segment performance and allocate resources. The registrant determines that GAAP operating profit is the required measure of segment profit and loss since it represents the measure of segment performance that is most consistent with GAAP measurement principles. Further, the registrant concludes that GAAP gross profit is fully burdened and has been determined in a manner consistent with GAAP measurement principles. Therefore, disclosure of segment gross profit and operating profit would be consistent with ASC 280 (as amended by ASU 2023-07), and neither would be subject to the SEC’s non-GAAP rules and regulations.

### Example 5

**Multiple Measures of Segment Profit and Loss, Some of Which Are Not Consistent With GAAP**

Assume that a registrant’s CODM regularly reviews GAAP operating profit and EBITDA to assess segment performance and allocate resources. The registrant would identify GAAP operating profit as the required measure of segment profit and loss since it would represent the measure of segment performance that is most consistent with GAAP measurement principles. EBITDA would be considered an additional measure that may be disclosed under ASC 280 (as amended by ASU 2023-07); however, such a disclosure is neither required nor expressly permitted. Therefore, disclosure of segment EBITDA, total segment EBITDA, or consolidated EBITDA would be subject to the SEC’s non-GAAP rules and regulations.

### Retrospective Adoption Considerations

After adopting the ASU, when recasting prior-period segment information to conform to current-period segment information, a registrant must consider the impact of retrospective changes on its historical financial statements included in its reports under the Securities Exchange Act of 1934 (e.g., Forms 10-K and 10-Q), in registration statements under the Securities Act of 1933 (e.g., registration statements on Form S-3), and other nonpublic offerings.

The requirement to retrospectively revise the annual preadoption financial statements and other affected financial information after the adoption of this ASU may be accelerated when the preadoption financial statements are reissued, as discussed in ASC 855-10-25-4 (see Form S-3, Item 11(b)(ii)). Such reissuance may occur when a registrant:

- Files a new or amended registration statement. A registrant is generally required to file recasted financial statements that reflect the change for all periods presented if the change is considered material.

---

7 Question 104.04 of the SEC’s C&DIs on non-GAAP financial measures.
• Files a Form S-8. A registrant is generally not required to update its previously issued financial statements in a new Form S-8 to reflect a change unless it constitutes a “material change in the registrant’s affairs.”

• Issues a prospectus supplement. A registrant is generally not required to update its previously issued financial statements unless the registrant considers the change to be a fundamental change.

• Issues securities in a nonpublic offering. If an entity incorporates its financial statements into the nonpublic offering, it should apply the above framework related to a prospectus supplement. If the financial statements are included in the nonpublic offering document, the entity should apply the guidance related to a new or amended registration statement.

Registrants should consider consulting with their auditors and legal counsel regarding the impact of the retrospective changes when adopting the ASU.

See Section 6.5 of Deloitte’s Roadmap Segment Reporting for further details on the reporting implications of retrospective changes to reportable segments.

Effective Date and Transition

Effective Date

The amendments in ASU 2023-07 are effective for all public entities for fiscal years beginning after December 15, 2023 (e.g., for calendar-year-end public entities, annual periods beginning on January 1, 2024 — i.e., December 31, 2024, Form 10-K), and interim periods within fiscal years beginning after December 15, 2024 (e.g., for calendar-year-end public entities, interim periods beginning on January 1, 2025 — i.e., Form 10-Q for the first quarter of 2025). Early adoption is permitted.

Transition

The enhanced segment disclosure requirements apply “retrospectively to all prior periods presented in the financial statements.” The significant segment expense and other segment item amounts “disclosed in prior periods shall be based on the significant segment expense categories identified and disclosed in the period of adoption.”

(a) The revenue from external customers for the finance segment relates to interest and noninterest income.
(b) Revenue and profit or loss from segments below the quantitative thresholds are attributable to four operating segments of Diversified Company. Those segments include a small real estate business, an electronics equipment rental business, a software consulting practice, and a warehouse leasing operation. None of those segments has ever met any of the quantitative thresholds for determining reportable segments.
(c) The significant expense categories and amounts align with the segment-level information that is regularly provided to the chief operating decision maker. Intersegment expenses are included within the amounts shown.
(d) For the finance segment, the chief operating decision maker uses only pretax profit or loss as the measure to allocate resources and assess segment performance. As a result, segment gross profit is not reported for the finance segment.
(e) The nonmanufacturing payroll expense does not include amounts capitalized on the balance sheet or included within other expense categories.
(f) Other segment items for each reportable segment includes:
   - Auto parts — maintenance, professional services expense, and repairs expense and certain overhead expenses.
   - Motor vessels — marketing expense, professional services expense, occupancy expense, and certain overhead expenses.
   - Software — depreciation and amortization expense, travel expense, office supplies expense, and certain overhead expenses.
   - Electronics — depreciation and amortization expense, marketing expense, occupancy expense, and certain overhead expenses.
   - Finance — depreciation and amortization expense, property tax expense, certain overhead expenses, and other gains or losses.
(g) Interest income/(expense), net (excluding finance segment) of $1,125 comprises (i) consolidated total interest revenue (excluding finance segment) of $3,825 and (ii) consolidated total interest expense (excluding finance segment) of $2,700.
(h) Segment operating expenses, net (excluding finance segment) of $17,930 includes research and development expense, nonmanufacturing payroll expense, professional services expense, and other segment items for the auto parts, motor vessels, software, and electronics segments.
Example 2

**ASC 280-10**

**Case A: Disclosure of Descriptive Information About the Reportable Segment**

The following is an example of the required disclosures about a public entity’s reportable segment.

a. Description of the types of products and services from which the reportable segment derives its revenues (see paragraph 280-10-50-21(b)).
   The software segment derives revenues from customers by providing access to cloud computing applications under software-as-a-service arrangements. The most popular cloud computing application is an enterprise resource planning application used primarily by customers to manage functions such as accounting, financial management, project management, and procurement. The service term for the software arrangements is variable, with the median term being approximately five years.

b. Measure of segment profit or loss and assets (see paragraph 280-10-50-29).
   The accounting policies of the software segment are the same as those described in the summary of significant accounting policies.
   The chief operating decision maker assesses performance for the software segment and decides how to allocate resources based on net income that also is reported on the income statement as consolidated net income.
   The measure of segment assets is reported on the balance sheet as total consolidated assets.

c. How the chief operating decision maker uses the reported measure of segment profit or loss (see paragraph 280-10-50-29(f)).
   The chief operating decision maker uses net income to evaluate income generated from segment assets (return on assets) in deciding whether to reinvest profits into the software segment or into other parts of the entity, such as for acquisitions or to pay dividends.
   Net income is used to monitor budget versus actual results. The chief operating decision maker also uses net income in competitive analysis by benchmarking to ABC Company’s competitors. The competitive analysis along with the monitoring of budgeted versus actual results are used in assessing performance of the segment and in establishing management’s compensation.

d. ABC Company does not have intra-entity sales or transfers.

e. Factors that management used to identify the public entity’s reportable segments (see paragraph 280-10-50-21(a)).
   ABC Company has one reportable segment: software. The software segment provides cloud computing services to customers under software-as-a-service arrangements. ABC Company derives revenue primarily in North America and manages the business activities on a consolidated basis. The technology used in the customer arrangements is based on a single software platform that is deployed to and implemented by customers in a similar manner.

f. The title and position of the individual or the group identified as the chief operating decision maker (see paragraph 280-10-50-21(c)).
   ABC Company’s chief operating decision maker is the senior executive committee that includes the chief operating officer, chief financial officer, and the chief executive officer.

\(\text{a}\) Other segment items included in Segment net income includes marketing expense, restructuring expense, foreign currency exchange gains and losses, and other overhead expense.

---

8 See the SEC Reporting Considerations section above for clarifications the SEC staff made at the AICPA Conference regarding entities with a single reportable segment.
Dbriefs for Financial Executives
We invite you to participate in Dbriefs, Deloitte's live webcasts that give you valuable insights into important developments affecting your business. Topics covered in the Dbriefs for Financial Executives series include financial reporting, tax accounting, business strategy, governance, and risk. Dbriefs also provide a convenient and flexible way to earn CPE credit — right at your desk.

Subscriptions
To subscribe to Dbriefs, or to receive accounting publications issued by Deloitte's Accounting and Reporting Services Department, please register at My.Deloitte.com.

The Deloitte Accounting Research Tool
Put a wealth of information at your fingertips. The Deloitte Accounting Research Tool (DART) is a comprehensive online library of accounting and financial disclosure literature. It contains material from the FASB, EITF, AICPA, PCAOB, and SEC, in addition to Deloitte's own accounting manuals and other interpretive guidance and publications.

Updated every business day, DART has an intuitive design and navigation system that, together with its powerful search and personalization features, enable users to quickly locate information anytime, from any device and any browser. While much of the content on DART is available at no cost, subscribers have access to premium content, such as Deloitte's FASB Accounting Standards Codification Manual. DART subscribers and others can also subscribe to Weekly Accounting Roundup, which provides links to recent news articles, publications, and other additions to DART. For more information, or to sign up for a free 30-day trial of premium DART content, visit dart.deloitte.com.

Heads Up is prepared by members of Deloitte's National Office as developments warrant.
